WO 2005/023710 PCT/EP2004/010169

CLAIMS

5 1. A process for the catalytic partial oxidation of liquid fuels, selected from hydrocarbon and/or oxygenated
compounds, together with gaseous fuels, selected from
hydrocarbon compounds, natural gas and/or LPG, by
means of a suitable catalytic system comprising the
following steps:

15

. 20

- premixing and optionally heating to temperatures ranging from 25 to 400°C, the reagents consisting of said liquid hydrocarbons, said gaseous hydrocarbons and oxygen or air or oxygen enriched air, optionally in the presence of vapour and/or CO₂;
- reacting the mixture of reagents in the catalytic zone, at inlet temperatures ranging from 50 to 500°C and space velocities ranging from 1000 to 1,000,000 Nl reagents/L cat x h, reaching temperatures at the outlet of the catalytic bed ranging from 450 to 1350°C.
- The process according to claim 1, wherein, heavy residues from oil distillation are also present among the reagents.
- 3. The process according to claim 2, wherein the heavy residues from oil distillation are mixed with the rea-

gents after being fluidized by means of thermal treatment or by dilution with suitable gas oils.

- 4. The process according to claim 1, wherein the catalytic system consists of oxides, oxynitrides, nitrides, carbides and/or oxycarbides containing one or more elements selected from Rh, Ru, Ir, Pt, Ni, Fe, Co and Mo.
- 5. The process according to claim 1, wherein, among the reagents, the ratio between vapour moles/moles of hydrocarbon carbon atoms (vapour/C) at the inlet of the catalytic zone ranges from 0 to 2 and the ratio between oxygen moles/moles of hydrocarbon carbon atoms (O₂/C) ranges from 0.1 to 0.8.
- 6. 6. The process according to claim 1, wherein, among the reagents, the ratio between vapour moles/moles of hydrocarbon carbon atoms (vapour/C) at the inlet of the catalytic zone ranges from 0.1 to 1 and the ratio between oxygen moles/moles of hydrocarbon carbon atoms (O₂/C) ranges from 0.25 to 0.75.
